ROCHESTER, N. Y.

Northern-Grown English Walnuts

"The Tree of Trees." For Safe Planting in Zero Climates

Our Glenwood grown English Walnut trees of today have been bred for their majestic beauty as well as for the golden crops they bear. Likewise, they have been bred for health, hardiness and resistibility in Northern climates, and may be grown practically anywhere under the Canadian border and any place in the World where peaches grow.

They will do well in any fair soil which is well-drained, and with ordinary care will yield an income double and triple that of the ordinary fruit orchard. A four-acre orchard of 215 seedling trees near Rochester, N. Y., bore this last Fall, nearly eight thousand pounds of delicious thin-shell English Walnuts, which sold wholesale at 25c per pound, producing an income of nearly \$500.00 per acre, and this in spite of the fact that the heavy rains had affected to some extent the pollen. These are absolute figures and you can secure the same results if you will give the same care, time and attention to an orchard of these Walnut trees that you would to an apple or peach orchard, the fruit of which must be harvested and sold immediately or be a total loss, and are often a drug on the market.

Beautiful too, for lawn or driveway, the English Walnut trees lend comfort and attractiveness to the home, as well as distinctiveness and character, which come only from the unique and useful. This tree supplying bountiful crops of delicious nuts for your table, as well as shade, fulfills a double duty and truly makes it the "Tree of Trees."

We are the farthest North growers of English Walnuts, and believe that our severe climatic conditions insure much hardier trees than can be grown farther south. From observation and years of experience for real practical purposes, we prefer and recommend for severe climates, trees kept closely to the parent type. We have the following varieties that we heartily endorse, which will grow and bear nuts wherever Peaches will live, and are as easily cared for.

Concord—Native of California. Enormous bearer, rapid grower.
Mayette—The Grenoble nut of commerce. Safe from late frosts.

Franquette—Peer of all foreign varieties. Exquisite dessert nut.
Pomeroy—Origin, Western New York. A lofty growing tree. Annual bearer.

Prices—1-1½ ft.	\$.50 each	\$ 5.00 per doz.	\$35.00 per 100
2-3 ft.	.75 each	8.00 per doz.	50.00 per 100
3-4 ft.	1.00 each	10.00 per doz.	65.00 per 100

Mayette—Special size early-bearing trees, ideal for transplanting for immediate effect.
Prices—6-8 ft., \$3.00 each; \$30.00 per doz.

FAIRPORT (Mayo). A new and very valuable variety originated here. Tree rapid grower, bears at four years of age, nuts are ripe and fall from trees in September. The nuts bring 4c to 5c more per pound than the California Walnuts. A large orchard of these trees, near Rochester, bore a generous crop the sixth year. Meat is crisp and delicious. A splendid dessert nut as well as important commercially. The ultimate tree for commercial and ornamental planting.

THOMSON—Real paper shell. Origin, Avon, N. Y. A strong growing, ironclad variety, safe and reliable. A commercial nut for severe climates; sweet and delicious, selling at wholesale at a higher price per pound in Rochester markets than the California or French nuts.

Prices—2-3 ft.	\$1.00 each	\$10.00 per doz.	\$60.00 per 100
3-4 ft.	1.50 each	15.00 per doz.	100.00 per 100
4-6 ft.	2.50 each	25.00 per doz.	

Grafted and Budded English Walnut Trees

To those of our customers who prefer the Budded or Grafted trees, we are prepared to offer some excellent specimens of the **Mayette** variety which is the Grenoble nut of France. This is a large, well-shaped nut with light colored shell. The kernel is full fleshed, sweet and nutty; it is quite late in blooming, thus enabling it to escape the disastrous effect of late frosts in the spring.

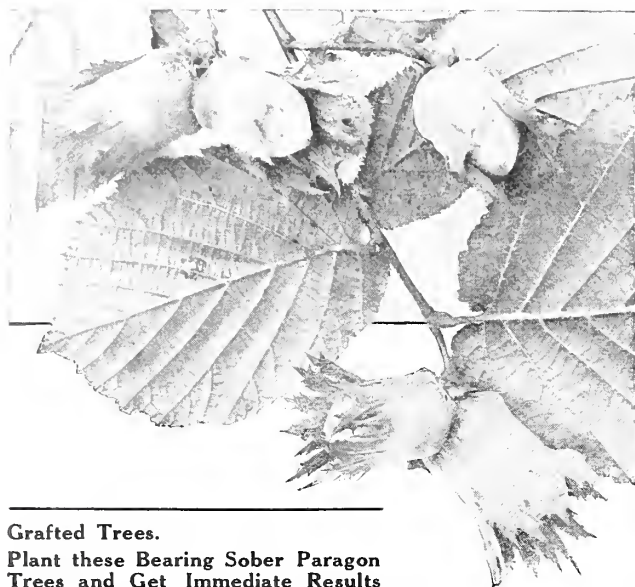

2-3 ft., \$2.00 each; \$18.00 per doz. 3-4 ft., \$3.00 each; \$25.00 per doz.

Walnut Trees Are Very Beautiful Shade Trees and Prolific Nut Bearers

A view in the Thomson English Walnut orchard near Rochester. The largest commercial orchard in the East. 228 trees raised from seed planted by Mr. Thomson in 1886. This orchard has endured all these years with absolutely no winter killing—with occasional temperatures twenty degrees below zero. 1915 crop, 260 bushels, was sold at 25c per pound—32 pounds per bushel, \$2,080.

Pure Strain Filberts

The Filbert is probably the least understood of all Nut trees in the East, and yet it is a Nut tree of great commercial value and bound to be very important in the future development of Nut culture.

It is admirably adapted to grow throughout the North on account of its hardiness. It comes into bearing early, often at two years of age and is a steady cropper. Frosts never seem to affect it in the least. Filberts will do well on almost any soil but succeed best on clayey loam, rather moist. It is a rapid grower and should be trained as a tree.

It is especially well adapted to be used as a filler for Walnut orchards and under such conditions, the Filbert trees should be spaced 15 ft. apart.

We offer the following varieties and sizes:

KENTISH COB (English). Nut large, oblong, somewhat compressed, kernel plump and of rich flavor; an excellent keeper. Husk quite smooth, longer than nut and but slightly cut in margin. Tree productive. Considered the best variety grown in England, where it has been known since 1812.

PURPLE-LEAVED (Avellano Atro-purpurea). Nut large, thin-shelled, delicious quality; one of the best. The leaves and husk are of a deep purple color, which is retained till frost. Very ornamental.

HAZELNUT (American Filbert). Bears excellent nuts and in great quantities; also very ornamental.

Plant these Bearing Sober Paragon Trees and Get Immediate Results

Sober Paragon Mammoth Sweet Chestnuts

Sober Paragon Mammoth Sweet Chestnut will thrive anywhere apples, pears and other fruit trees do. It will withstand extremes of heat, cold and drouth with less injury than most trees. It will even grow in poor soil, cultivation not being necessary, although careful cultivation will greatly increase the yield. The chief requirement is a well-drained soil, kept free from underbrush. The care and attention that you would give an apple orchard will pay big dividends if spent upon an orchard of Sober Paragon Chestnut trees. Moreover, your orchard begins paying you results almost at once, since you start with BEARING TREES.

The tree shown in this picture is one of our specimen 9 to 12 ft. trees loaded with burrs full of delicious large Sober Paragon Chestnuts. It is just such trees as this that you will need and such as this that we will ship to meet your needs. We offer for Spring delivery only, prices subject to the trees being unsold at time order is received:

1,200 Specimen Sober Paragon Chestnut trees. All have borne several crops.
\$5.00 Each \$50.00 Per Doz. \$300.00 Per Hundred

The above average 9 to 12 ft. in height, grafted, well rooted and beautifully branched, a specimen tree in every respect.

5,000 Special Bearing Sober Paragon Chestnut trees, 6-8 ft.
\$2.50 Each \$20.00 Per Doz. \$150.00 Per Hundred

50,000 Bearing Sober Paragon Chestnut trees, 3-5 ft.
\$1.50 Each \$15.00 Per Doz. \$110.00 Per Hundred

We are the authorized introducers and distributors of the Sober Paragon Chestnut, and every genuine tree bears this seal (see illustration) which is protected by law. The words "Sober Paragon" are stamped in the metal.

Seal Copyrighted 1908; Registered U. S. Patent Office

Superb Everbearing Strawberries

Produce Berries from June till Frost
Bear a Crop the Same Season Set Out

There are no lingering doubts as to the practical value of this new race of Strawberries. Not a discordant note in the general praise of their valuable qualities.

Berries large, perfectly formed, beautifully colored, deliciously flavored. Hardy in plant, in blossom, in fruit. Luscious berries on your table for four months of the year.

"You simply cannot keep them from fruiting, from June until November, unless you pick their blossoms. They are the most persistent plants in their fruiting habit I have ever known."—Country Gentleman, Jan. 22, 1916.

BEST FOR MARKET AND BEST FOR HOME because they afford good picking a week before early varieties of the old kinds. Crop of June compares favorably with the old kinds and does not exhaust the vitality of the plant. Hardy from Maine to California, from Hudson Bay to Florida.

RECORD—550 Superb, planted May 1st, bore during August, September and October, 400 quarts. Actual price per quart averaged 45c. Yield per acre, 7,200 quarts. One square rod planted produced July 23d, 3 quarts; August, 24 quarts; September, 24½ quarts; October, 23 quarts. These are facts—not guesses or speculations. It brings out forcibly the immediate returns that may be expected.

A magical opportunity for everyone, everywhere—a quart of luscious berries on the table three months in the year from a square rod (16½ feet square) is within the reach of almost everyone, even the city resident.

Strong, field-grown plant, \$1 per 12; \$5 per 100; \$25 per 1,000.

THE NEW ROCHESTER PEACH

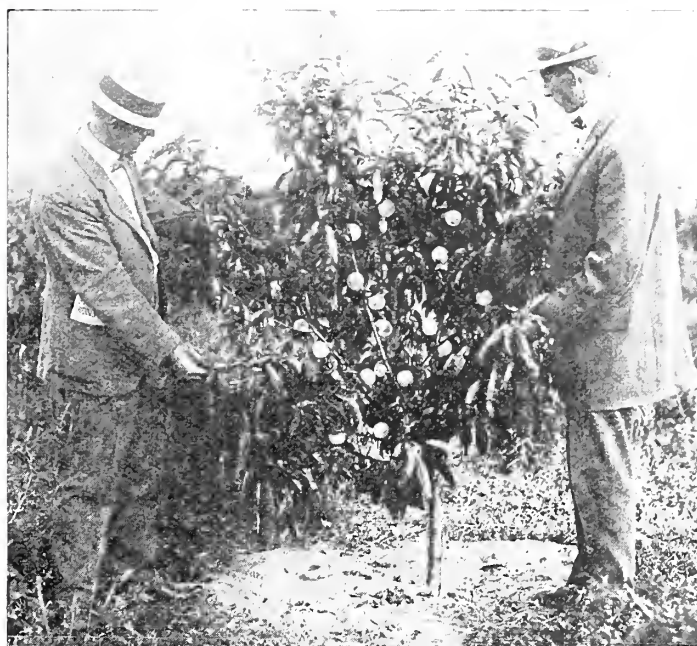

Originated in Rochester, N. Y.

Large, yellow and red free-stone; flesh yellow, very highly flavored; stone very small. To eat out of hand or canned it cannot be equalled as a table delicacy. Will ship as good as an Elberta. The peach comes into ripening the middle of August, when there is no other yellow and red free-stone of quality on the market, so you can readily see that it will command the highest price.

A few years of experimenting has brought this peach to the front, and fruit-growers of today are recognizing it as the famous Rochester Peach.

It was originated in Rochester, N. Y., by Mr. Wallen, who planted as an experiment a few peach seeds. One tree produced large yellow and red free-stone peaches; the balance, just natural fruit.

The original orchard has borne its sixth annual crop this season, being the finest quality the trees have ever produced—some specimens measuring twelve inches in circumference and weighing twelve ounces. The fruit sold at the orchard and to local groceries at One Dollar per eleven-quart basket.

1-YEAR TREE

Planted in 1914; bearing 17 peaches in 1915.

2-YEAR TREE

This is one of 200 trees planted in 1913—averaging 1 bushel each in 1915.

The tree is a strong, upright grower, hardy as an oak. Has stood 16 degrees below zero and produced a full crop; while Elberta and Crawford under the same conditions in the same orchard produced no blossoms, and consequently no fruit.

The tree comes into bearing when very young. The accompanying picture is an illustration of one of 500 trees planted by Mr. Yarker, Greece, N. Y., in the spring of 1914, which produced 17 peaches in the month of August, 1915. Mr. Rudman, of Irondequoit, N. Y., informs us he had one the same age in his orchard of 3,500 Rochester trees, bearing 27 peaches.

It is seldom known to fruit-growers for young trees planted a little over a year to bear fruit. The New Rochester Peach solves the problem for you.

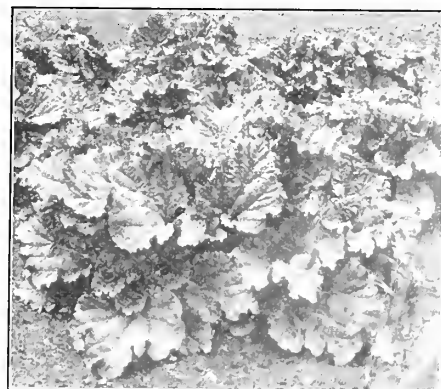

Prices—Handsome special size trees, \$1.00 each; \$5.00 per six; \$9.00 per dozen; \$60.00 per hundred.

**The Rochester Peach is Unequalled
as a Table Delicacy**

Champagne Wine Plant [Rhubarb]

CHAMPAGNE WINE PLANT (Rhubarb). Named because of its fine sparkling flavor. It is the "Ne-plus-ultra" of all Rhubarb, surpassing all other varieties not only in flavor and delicate tenderness of its crimson stalks, but also in size, the actual weight of twelve stalks being eleven pounds and one ounce. Those who have never tasted Champagne Rhubarb will have a real surprise. With this variety it is possible to have Rhubarb on your table from Spring until Autumn. It will supply an abundance of appetizing sauce and pies. Few private gardens are without this healthful vegetable and none should be. Its culture is the simplest.

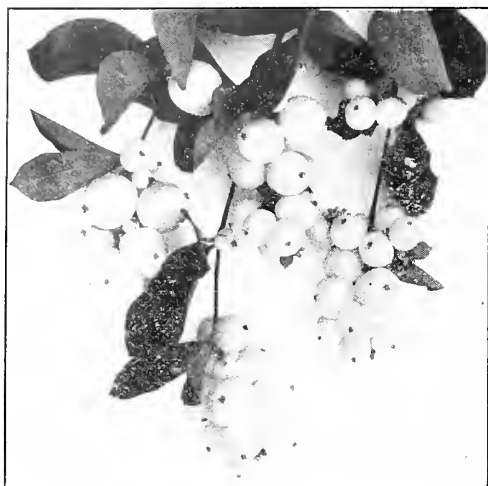

Prices, for strong, two-year-old roots: 50c each; \$3.00 per doz.; \$15.00 per hundred.

A FEW SHRUBS Selected for Their Charm and Beauty, as Well as Health and Hardiness, Everywhere and Under All Conditions

SYMPHORICARPOS

Handsome, hardy shrubs with very showy berries. Their branches loaded with red and white berries, make beautiful decorations for the living-rooms during the winter.

SYMPHORICARPOS (Snow-berry). A graceful shrub, 3 to 5 ft. tall, with slender branches. Flowers white or pink, in loose, often leafy racemes, in summer. Berries white, long persistent, produced

in showy profuse clusters, the branches bending under their weight. Very ornamental, and a capital companion for the next species.

Extra fine specimen plants, 35c each; \$3.00 per doz.

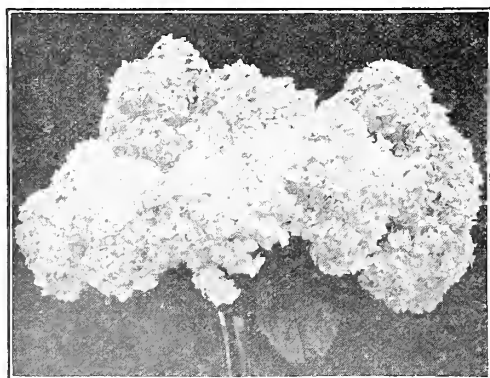

SYMPHORICARPOS VULGARIS (Coral-Berry, or Indian Currant). A grand shrub, producing a wealth of red or purplish berries which remain on the branches all winter. Grows naturally from New York and Dakota southward to Georgia and Texas. Leaves ovate, bright green, often tinged with reddish purple when young, persisting until early winter. Flowers greenish red, in summer. Berries coloring in early autumn, very showy.

Heavy special selected specimens, 35c each; \$3.00 per doz.

Producing "Hills of Snow" From June Until Fall

Hydrangea Arborescens Sterilis

A Continuous Flowering Shrub

This new shrub is fast taking the place in public favor so long held by *Hydrangea Paniculata Grandiflora*. The flowers are purer white than those of *Hydrangea P. G.*, are quite as large, and are borne in as great or greater profusion, remaining on the bush long after the foliage has disappeared, and well into the winter.

It has all the good qualities of *Hydrangea Paniculata Grandiflora* and others peculiarly its own. While quite as bold and striking in its general characteristics it is coupled with a grace and elegance not found in the old favorite. Every shoot terminates in a showy bloom cluster. It produces from July until Fall a bewildering profusion of flower heads, resembling giant snowballs—and much handsomer than those of other *Hydrangeas*.

Price, extra heavy plants, 50c each; \$5.00 per doz.

ELEAGNUS LONGIPES

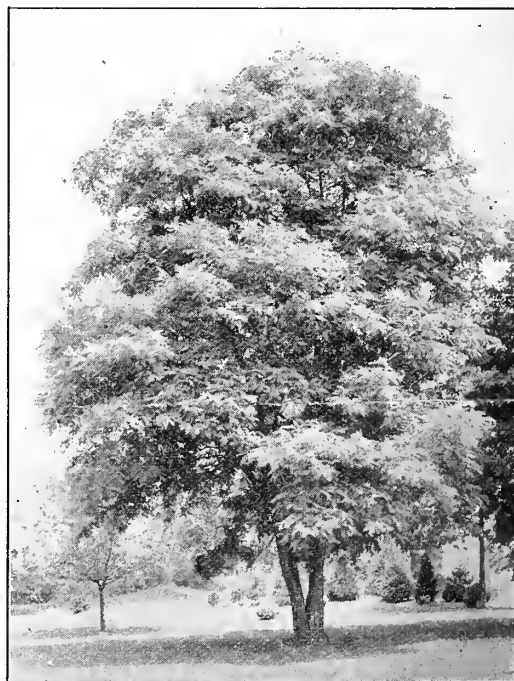

ELAEAGNUS LONGIPES (The Fragrant "Goumi" of Japan).

A large shrub with reddish brown branches. Native of China and Japan. Leaves oval, dark green above, with scattered brown scales beneath. Flowers yellowish white, fragrant, fruit red, drooping on long slender stalks, ripening in summer. Height 5 to 8 feet. A shrub of more than ordinary merit. The acid and slightly astringent fruit is often used in making delicious jellies and jams.

Extra fine plants 50 cents each; \$5.00 per doz.

ROBINIA PSEUDACACIA

(BLACK LOCUST)

ROBINIA PSEUDACACIA. One of the most beautiful and delightful of all ornamental trees. A lofty growing tree of graceful habit; of rapid growth when young, reaching an effective stage in a short time. Leaves compound, with seven to nineteen leaflets, bright green, turning to rich gold in Autumn. Flowers white, very fragrant, borne in drooping racemes expanding in May or June. Its beauty has long been recognized by discriminating planters and landscape architects.

Beautiful specimens, branched, 5 to 8 ft., \$1 each; \$9 per doz.
